Since the 1960s, in comparison to other ethnic and gender groups, a higher rate of depression and suicide ideation has been documented for Latina girls. This Brief offers a concise summary of contemporary research on this critical topic.

Among the considerations are the influence of bullying, families, immigration, and culture on Latina adolescent mental health. Presenting cutting-edge multiracial feminist frameworks for new and existing empirical findings, this book serves to guide the future research agenda on this topic. Clinical recommendations are also included.
