Fire, Climate Change, and Carbon Cycling in the Boreal Forest (Ecological Studies)

Fire, Climate Change, and Carbon Cycling in the Boreal Forest (Ecological Studies)

A discussion of the direct and indirect mechanisms by which fire and climate interact to influence carbon cycling in North American boreal forests. The first section summarizes the information needed to understand and manage fires' effects on the ecology of boreal forests and its influence on global climate change issues. Following chapters discuss in detail the role of fire in the ecology of boreal forests, present data sets on fire and the distribution of carbon, and treat the use of satellite imagery in monitoring these regions as well as approaches to modeling the relevant processes.
