RFID and beyond - a survey on the most recent developments in wireless authentication systems (German Edition) Sascha Gottwald

Studienarbeit aus dem Jahr 2004 im Fachbereich Informatik - Internet, neue Technologien, Note: 1,0, Freie Universität Berlin (Institut für Informatik), Veranstaltung: Understanding mobile technologies and services, 18 Quellen im Literaturverzeichnis, Sprache: Deutsch, Abstract: Immer wieder liest man heute in der Presse, RFID wäre die Zukunft. Nun stellt sich die Frage, die Zukunft von was. Was ist überhaupt RFID? Leider kann man diese Frage nicht ganz so einfach beantworten. RFID oder auch generell Verfahren zur Autoidentifikation dienen sehr generell formuliert der drahtlosen Übertragung von Objektdaten zum Zwecke der Erfassung und eindeutigen Identifizierung der entsprechenden Objekte. Diese Objekte kön-nen sehr vielfältig sein, von Warenpaletten bis zu Personen. Ein Einsatzge-biet von RFID, welches von der Industrie momentan wohl am meisten geför-dert wird, stellt die Anwendung in der Logistik dar. An die Stelle der auf-wändigen manuellen Erfassung von eingehenden und ausgehenden Waren rückt die automatische, berührungslose Registrierung, die den gesamten Weg der Versorgungskette, vom Hersteller bis in den Supermarkt, vereinfachen und kosteneffektiver machen soll.
