Energy Systems: A New Approach to Engineering Thermodynamics Renaud Gicquel

Considered as particularly difficult by generations of students and engineers, thermodynamics applied to energy systems can now be taught with an original instruction method. **Energy Systems** applies a completely different approach to the calculation, application and theory of multiple energy conversion technologies. It aims to create the reader's foundation for understanding and applying the design principles to all kinds of energy cycles, including renewable energy. Proven to be simpler and more reflective than existing methods, it deals with energy system modeling, instead of the thermodynamic foundations, as the primary objective. Although its style is drastically different from other textbooks, no concession is done to coverage: with encouraging pace, the complete range from basic thermodynamics to the most advanced energy systems is addressed.

The accompanying Thermoptim™ portal (http://direns.mines-paristech.fr/Sites/Thopt/en/co/_Arborescence_web.html) presents the software and manuals (in English and French) to solve over 200 examples, and programming and design tools for exercises of all levels of complexity. The reader is explained how to build appropriate models to bridge the technological reality with the theoretical basis of energy engineering. Offering quick overviews through e-learning modules moreover, the portal is user-friendly and enables to quickly become fully operational. Students can freely download the Thermoptim™ modeling software demo version (in seven languages) and extended options are available to lecturers. A professional edition is also available and has been adopted by many companies and research institutes worldwide - www.thermoptim.org

This volume is intended as for courses in applied thermodynamics, energy systems, energy conversion, thermal engineering to senior undergraduate and graduate-level students in mechanical, energy, chemical and petroleum engineering. Students should already have taken a first year course in thermodynamics. The refreshing approach and exceptionally rich coverage make it a great reference tool for researchers and professionals also. Contains International Units (SI).

From reader reviews:

Crystal Sanchez:

Do you have favorite book? In case you have, what is your favorite's book? Publication is very important thing for us to find out everything in the world. Each guide has different aim or maybe goal; it means that reserve has different type. Some people really feel enjoy to spend their time and energy to read a book. They may be reading whatever they take because their hobby is reading a book. Think about the person who don't like looking at a book? Sometime, person feel need book when they found difficult problem or exercise. Well, probably you will need this Energy Systems: A New Approach to Engineering Thermodynamics.

Ryan Brown:

Reading a publication can be one of a lot of exercise that everyone in the world likes. Do you like reading book and so. There are a lot of reasons why people enjoyed. First reading a book will give you a lot of new data. When you read a guide you will get new information simply because book is one of many ways to share the information or their idea. Second, reading through a book will make you more imaginative. When you examining a book especially fictional book the author will bring that you imagine the story how the character types do it anything. Third, you may share your knowledge to some others. When you read this Energy Systems: A New Approach to Engineering Thermodynamics, it is possible to tells your family, friends and also soon about yours publication. Your knowledge can inspire average, make them reading a reserve.

Nathaniel Marvel:

The guide with title Energy Systems: A New Approach to Engineering Thermodynamics has a lot of information that you can find out it. You can get a lot of help after read this book. This book exist new expertise the information that exist in this publication represented the condition of the world currently. That is important to yo7u to learn how the improvement of the world. This particular book will bring you inside new era of the the positive effect. You can read the e-book on your smart phone, so you can read this anywhere you want.

Pearlie Wong:

In this period globalization it is important to someone to get information. The information will make professionals understand the condition of the world. The condition of the world makes the information quicker to share. You can find a lot of personal references to get information example: internet, magazine, book, and soon. You will see that now, a lot of publisher this print many kinds of book. Often the book that recommended to your account is Energy Systems: A New Approach to Engineering Thermodynamics this reserve consist a lot of the information with the condition of this world now. This particular book was represented how does the world has grown up. The language styles that writer make usage of to explain it is easy to understand. The particular writer made some exploration when he makes this book. That's why this

book suited all of you.
