Germ Cell Development, Division, Disruption and Death (Serono Symposia USA)

Germ Cell Development, Division, Disruption and Death (Serono Symposia USA)

This book is composed of chapters prepared by invited speakers of the XIVth North American Testis Workshop, held in Baltimore, Maryland, February 19 to 22, 1997. The book reflects the desire of the Testis Workshop Scientific Committee for a program addressing a broad array of current research focused on the germ cell, from its development through its death. Consequently, the research of those who have contributed chapters to this book addresses, or can be applied to, the hormonal and molecular regulation of spermatogonial cell development and maturation (Nishimune, Orth, Russell, Dym), meiosis (Bickel, Wolgemuth, Handel, Trasler), spermatogenesis (Sassone-Corsi, Habener, Braun), cell death and aging (Campisi, Chen, Knudson, Swerdloff), and toxicant effects on spermatogenesis (Sharpe, Keice, Robaire, Meistrich). In their preface to the proceedings of the 1988 Testis Workshop, Drs. Larry Ewing and Bernard Robaire noted that the first published description of seminiferous tubules in the testis was in 1668, by C. Aubry, and that "the exciting papers in these proceedings [of the 1988 Workshop] emphasize the significant progress that has been made since the mid-17th century in understanding testis and function. " It is quite clear that current research is proceeding at a breathtaking pace, with enormous strides having been made even since the XIIIth Workshop in 1995. If the XIVth Workshop succeeded, and this book succeeds, in conveying this excitement in our field (which, of course, was our intent), credit belongs to the creativity of the Scientific Committee, whose members were William J.
