## Robotic Fabrication in Architecture, Art and Design 2014

Robotic automation has become ubiquitous in the modern manufacturing landscape, spanning an overwhelming range of processes and applications-- from small scale force-controlled grinding operations for orthopedic joints to large scale composite manufacturing of aircraft fuselages. Smart factories, seamlessly linked via industrial networks and sensing, have revolutionized mass production, allowing for intelligent, adaptive manufacturing processes across a broad spectrum of industries. Against this background, an emerging group of researchers, designers, and fabricators have begun to apply robotic technology in the pursuit of architecture, art, and design, implementing them in a range of processes and scales. Coupled with computational design tools the technology is no longer relegated to the repetitive production of the assembly line, and is instead being employed for the mass-customization of non-standard components. This radical shift in protocol has been enabled by the development of new design to production workflows and the recognition of robotic manipulators as “multi-functional” fabrication platforms, capable of being reconfigured to suit the specific needs of a process.

The emerging discourse surrounding robotic fabrication seeks to question the existing norms of manufacturing and has far reaching implications for the future of how architects, artists, and designers engage with materialization processes. This book presents the proceedings of Rob|Arch2014, the second international conference on robotic fabrication in architecture, art, and design. It includes a Foreword by Sigrid Brell-Cokcan and Johannes Braumann, Association for Robots in Architecture. The work contained traverses a wide range of contemporary topics, from methodologies for incorporating dynamic material feedback into existing fabrication processes, to novel interfaces for robotic programming, to new processes for large-scale automated construction. The latent argument behind this research is that the term ‘file-to-factory’ must not be a reductive celebration of expediency but instead a perpetual challenge to increase the quality of feedback between design, matter, and making.

---

### **From reader reviews:**

#### **Marian Perkins:**

The book untitled Robotic Fabrication in Architecture, Art and Design 2014 is the publication that recommended to you to read. You can see the quality of the book content that will be shown to a person. The language that creator use to explained their way of doing something is easily to understand. The copy writer was did a lot of study when write the book, therefore the information that they share to your account is absolutely accurate. You also could get the e-book of Robotic Fabrication in Architecture, Art and Design 2014 from the publisher to make you considerably more enjoy free time.

#### **George Thomas:**

The guide with title Robotic Fabrication in Architecture, Art and Design 2014 contains a lot of information that you can understand it. You can get a lot of gain after read this book. This kind of book exist new knowledge the information that exist in this reserve represented the condition of the world right now. That is important to yo7u to learn how the improvement of the world. This specific book will bring you throughout new era of the glowbal growth. You can read the e-book on the smart phone, so you can read this anywhere you want.

#### **Sarah Lopez:**

People live in this new moment of lifestyle always attempt to and must have the extra time or they will get wide range of stress from both way of life and work. So , if we ask do people have free time, we will say absolutely indeed. People is human not a robot. Then we inquire again, what kind of activity do you possess when the spare time coming to you of course your answer may unlimited right. Then do you try this one, reading textbooks. It can be your alternative in spending your spare time, the book you have read is actually Robotic Fabrication in Architecture, Art and Design 2014.

#### **Darrel Mason:**

In this particular era which is the greater person or who has ability to do something more are more important than other. Do you want to become considered one of it? It is just simple approach to have that. What you need to do is just spending your time not much but quite enough to have a look at some books. One of several books in the top listing in your reading list will be Robotic Fabrication in Architecture, Art and Design 2014. This book which can be qualified as The Hungry Mountains can get you closer in growing to be precious person. By looking up and review this reserve you can get many advantages.
