Presents a comprehensive overview and analysis of the recent developments in signal processing for Chipless Radio Frequency Identification Systems

This book presents the recent research results on Radio Frequency Identification (RFID) and provides smart signal processing methods for detection, signal integrity, multiple-access and localization, tracking, and collision avoidance in Chipless RFID systems. The book is divided into two sections: The first section discusses techniques for detection and denoising in Chipless RFID systems. These techniques include signal space representation, detection of frequency signatures using UWB impulse radio interrogation, time domain analysis, singularity expansion method for data extraction, and noise reduction and filtering techniques. The second section covers collision and error correction protocols, multi-tag identification through time-frequency analysis, FMCW radar based collision detection and multi-access for Chipless RFID tags as well as localization and tag tracking.

- Describes the use of UWB impulse radio interrogation to remotely estimate the frequency signature of Chipless RFID tags using the backscatter principle
- Reviews the collision problem in both chipped and Chipless RFID systems and summarizes the prevailing anti-collision algorithms to address the problem
- Proposes state-of-the-art multi-access and signal integrity protocols to improve the efficacy of the system in multiple tag reading scenarios
- Features an industry approach to the integration of various systems of the Chipless RFID reader-integration of physical layers, middleware, and enterprise software

Chipless Radio Frequency Identification Reader Signal Processing is primarily written for researchers in the field of RF sensors but can serve as supplementary reading for graduate students and professors in electrical engineering and wireless communications.

From reader reviews:

Nelson Gendron:

Do you have favorite book? Should you have, what is your favorite's book? Guide is very important thing for us to learn everything in the world. Each book has different aim or goal; it means that publication has different type. Some people truly feel enjoy to spend their time and energy to read a book. They are really reading whatever they consider because their hobby will be reading a book. Think about the person who don't like examining a book? Sometime, particular person feel need book when they found difficult problem as well as exercise. Well, probably you will need this Chipless Radio Frequency Identification Reader Signal Processing (Wiley Series in Microwave and Optical Engineering).

Lisa Buffington:

Reading a reserve tends to be new life style with this era globalization. With reading through you can get a lot of information that may give you benefit in your life. Along with book everyone in this world can share their idea. Publications can also inspire a lot of people. A lot of author can inspire all their reader with their story or even their experience. Not only situation that share in the ebooks. But also they write about the ability about something that you need example of this. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that you can get now. The authors on this planet always try to improve their proficiency in writing, they also doing some study before they write on their book. One of them is this Chipless Radio Frequency Identification Reader Signal Processing (Wiley Series in Microwave and Optical Engineering).

Arthur Furr:

Often the book Chipless Radio Frequency Identification Reader Signal Processing (Wiley Series in Microwave and Optical Engineering) has a lot associated with on it. So when you check out this book you can get a lot of advantage. The book was written by the very famous author. Tom makes some research previous to write this book. This book very easy to read you can get the point easily after reading this article book.

Kimberly Foust:

People live in this new day time of lifestyle always aim to and must have the free time or they will get lot of stress from both lifestyle and work. So , whenever we ask do people have free time, we will say absolutely yes. People is human not really a robot. Then we inquire again, what kind of activity do you have when the spare time coming to an individual of course your answer will unlimited right. Then do you ever try this one, reading guides. It can be your alternative with spending your spare time, typically the book you have read is definitely Chipless Radio Frequency Identification Reader Signal Processing (Wiley Series in Microwave and Optical Engineering).
